Measures for the Prevention of Painful Constitutional Disease.

Two Measures for the Prevention of Tablands Constitutional Disease.
Actuar heumation is a constitution disease, characterized by fever, infammation of the larger joints, and a two branes. Two hundred and thirty persons died from this cause in Mass chaests during the year 1880, or abo one to every one hundred and sevena niae deaths from all causes. But large majority of all cases end in 1 govern.

convey.

Thou maisism is produced by the accumulation of a pois-onous material in
the blood, deposited uear the joints.

The disease prevails most largely
in temperate climates, especially
the produced of the produced of the control
are characterized by sudden changes
of temperature. Liability to the discase is increased by those occup tions
which involve exposure to sudden
changes of temperature, by living in
ling in damp rooms or in damp sheets.

First attacks are rare after fifty years
years of age, and most common from
fifteen to thirty. Each attack increases
the liability to subsequent ones, and
fifteen to thirty. Each attack increases
the liability to subsequent ones, and
each attack. More males than Francies
are affected, probably because of their
great expoure. Disease of the heart
is the almost invariable result of repasted attacks, and is the most common the second of the second to the common than the second of the second of the second

The development of the second of the second
